Special Update

Date: June 29, 2018

To: All Authorized Motor Dealers

Subject: Announcing Availability of the **HyPer 9HV IS™** -144V Motors and Controllers!

Now available for Pre-Order with expected delivery in September 2018 – The new SRIPM **HyPer 9HV™** Motor and **HyPer-Drive X144™** Controller/Inverter. Technical Information, Performance Data, and Sales Sheets are now available at www.go-ev.com. Pricing for this new system and upcoming Dual Shaft Systems (whose official announcement and availability are coming soon) can be found on the attached Authorized Dealer Price List.

We have received many requests for this system, and initial availability is limited. We suggest you do not hesitate to reserve an urgently needed **HyPer 9HV IS™**.

Our previous **HyPer 9 IS™** price list was met with some confusion by many Dealers; therefore, we have implemented a new pricing structure. In an attempt to make our price list more straight forward, we have included the required GV200QA Contactor in the purchase price of our **HyPer 9 Systems™**. This Contactor is an essential add-on for any **HyPer-Drive™** Controller/Inverter, but we do not require Dealers to purchase it from NetGain Motors, Inc. If you wish to purchase the GV200QA elsewhere, a **HyPer™** Motor and **HyPer-Drive™** Controller/Inverter can be purchased as separate items. In any case, please note that this Contactor is still an included component in all **HyPer™** Suggested Retail Prices (MSRP). To purchase a Motor and Controller/Inverter that are designed for a different nominal voltage, (i.e. **HyPer 9HV™** Motor with **HyPer-Drive X1™** Controller/Inverter) please list the Motor and Controller/Inverter as separate items, as we do not define a complete System with mismatched component voltages. The GV200QA can be added on to complete a custom **HyPer System™**.

You may notice that our previous **HyPer 9 IS™** retail price included the Compact Display and HEPA Prius Throttle Pedal. In an attempt to maintain a low cost and keep our sales structure as simple as possible, the Compact Display and HEPA are no longer included in any **HyPer System™** MSRP. These components are still offered as Add-ons. Unless they are factored in as separate items, Dealers should remove the Compact Display and HEPA Prius Throttle Pedal as included items on their websites and sales materials.

Lastly, due to a recent influx in sales, all **HyPer™** Motors and Controllers are currently out of stock and back ordered. We try our best to anticipate demand and maintain a steady inventory of all products. However, there are times when we are unable to meet immediate demand. As such, we encourage Dealers to inventory our products. Our product availability and expected completion dates can be found here: http://www.go-ev.com/Motor_Status.html. All systems are available for Pre-Order.
